# Outdoor around buildings (Brown rat (Rattus norvegicus)):

Rats: High infestation: Up to 200g of bait per baiting point every 5 metres. Low infestation: Up to 200g bait per baiting point every 10 metres. Burrow baiting: 20-200g of bait per burrow.

Application methods: Ready-to-use bait to be used in tamper-resistant bait stations. Covered and protected baiting points. Direct application of ready-to-use bait into the burrow. Tamper-resistant bait stations must be: Strong enough to prevent entry or destruction by dogs. Strong enough to prevent entry or destruction by children under six years of age using hands, feet or objects reasonably expected to be available in the use area (e.g. household objects, toys etc). Lockable or sealable so that children and dogs cannot gain access through the opening or mechanisms used to fill the bait compartments. Resistant to destruction or weakening from exposure to typical non-catastrophic weather (e.g. direct sunlight, extremes of temperature and humidity, rain, snow etc). Protect bait from the atmospheric conditions. Place the baiting points in areas non-liable to flooding. Replace any bait in baiting points in which bait has been damaged by water or contaminated by dirt. Follow any additional instructions provided by the relevant code of best practice. For outdoor use, baiting points must be covered and placed in strategic sites to minimise the exposure to non-target species. Remove the remaining product at the end of treatment period (except when directly applied into burrows). Baits must be placed to minimise the exposure to non-target species and children. Cover or block the entrances of baited burrows to reduce the risks of bait being rejected and spilled. Follow any additional instructions provided by the CRRU UK Code of Best Practice (or equivalent). Sites under a permanent baiting regime should be inspected regularly in accordance with product label directions. The period between visits should be determined by the technician in charge but will not be longer than every four weeks when permanent baiting is conducted outdoors. For permanent baiting follow any additional instructions provided by the CRRU Guidance on Permanent Baiting. Where possible, prior to the treatment inform any possible bystanders (e.g. users of the treated area and their surroundings) about the rodent control campaign. Consider preventive control measures (e.g. plug holes, remove potential food and drinking as far as possible) to improve product intake and reduce the likelihood of reinvasion. To reduce risk of secondary poisoning, search for and remove dead rodents during treatment at frequent intervals, in line with the recommendations provided by the relevant code of best practice. Do not use this product in pulsed baiting treatments. Permanent baiting is strictly limited to sites with a high potential for reinvasion when other methods of control have proven insufficient. The permanent baiting strategy shall be periodically reviewed in the context of integrated pest management (IPM) and the assessment of the risk for re-infestation. When placing bait points close to surface waters (e.g. rivers, ponds, water channels, dykes, irrigation ditches) or water drainage systems, ensure that hait contact with water is avoided.

# Sewers (Brown rat (Rattus norvegicus)):

# Up to 200g bait per manhole.

Application methods: Realy-to-sue bat to be and/ored or applied in hait status greenting the ball from gretting into contact who wask events. Overall and protected ballop grins. Balls must be applied in a way so that the yel on ot come into contact with water and are not washed away. Where possible, it is enzommended that the treated are as it-settled every 4-weeks of the bests in order to and any section of an estation population. Do not use this product in pulsed balling treatments. Permanent balling is strictly limited to sites with a high potential for remainsol, when other methods of control heavy powers inordifient. The permanent balling stately shall be periodically releved in the context of integrated pest management (IPN) and the assessment of the risk force infections.
